World Wetlands Day

With 49 Ramsar sites India has largest network in South Asia

(Ministry of Environment, Forests and Climate Change)

February 08, 2022

"India having the largest network of Ramsar Sites in South Asia manifests the commitment of our citizens to protect flora and fauna and live in harmony with nature."

- Prime Minister Narendra Modi

Importance of Wetlands - Global Context

Wetlands are disappearing three times faster than forests and are Earth's most threatened ecosystem. Nearly 90 per cent of the world's wetlands have been degraded since the 1700s. Since 1970, that is in 50 years — 35 per cent of the world's wetlands have been lost. Human activities that lead to loss of wetlands include drainage and infilling for agriculture and construction, pollution, overfishing and overexploitation of resources, invasive species and climate change.

This vicious cycle of wetland loss, threatened livelihoods, and deepening poverty is the result of mistakenly seeing wetlands as wastelands rather than lifegiving sources of jobs, incomes, and essential ecosystem services. A key challenge is to change mindsets to encourage governments and communities to value and prioritize wetlands.

Wetlands are critically important ecosystems

that contribute to biodiversity, climate mitigation and adaptation, freshwater availability, world economies and more. It is urgent that we raise national and global awareness about wetlands in order to reverse their rapid loss and encourage actions to conserve and restore them. World Wetlands Day is the ideal time to increase people's understanding of these critically important ecosystems.

World Wetlands Day - Background

World Wetlands Day is celebrated each year on February 02 to raise awareness about wetlands. This day also marks the anniversary of the Convention on Wetlands, which was adopted as an international treaty. This intergovernmental treaty, called the Convention on Wetlands, was adopted in the Iranian city of Ramsar in 1971 and came into force in 1975. It provides the framework for the conservation and wise use of wetlands and their resources. Since then, almost 90 per cent of UN member states, from all the world's geographic regions, have acceded to become "Contracting Parties."

Through the designation of protected areas, the implementation of effective policies and the sharing of knowledge, the Convention enables countries to take measures to protect their wetlands and to use them wisely. It has been adopted by 172 countries. Each country joining the Convention must designate at least one wetland to be included in the <u>list of Wetlands of International Importance (Ramsar sites)</u>.

This year's celebration of World Wetlands Day in 2022 is especially significant — as on 30 August 2021 the UN General Assembly adopted Resolution 75/317 that established February 02 as World Wetlands Day. Besides, it is also an occasion to commemorate the signing of the Ramsar Convention on Wetlands in 1971.

<u>"Wetlands Action for People and Nature"</u> is the theme for 2022 highlighting the importance of actions to ensure the conservation and sustainable use of wetlands for human and planetary health.

Ramsar Convention

The Ramsar Convention on Wetlands provides the framework for the conservation and wise use of all wetlands through local and national actions and international cooperation, as contribution towards achieving sustainable development throughout the world.

The Convention Strategic Plan 2016-2024 includes a series of actions that are directly related to sustainable development

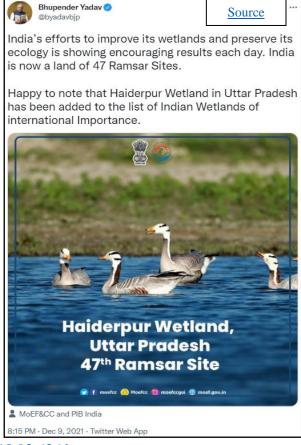

including water, livelihoods, biodiversity, disaster risk reduction, resilience and carbon sinks. Parties have also adopted a specific framework on water including river basin management, water allocation and ground water. The Secretariat is engaged in the Sustainable Development Goals (SDGs), as co-custodian with UNEP of indicator SDG 6.6.1 and Goals 14 and 15. It participates actively at the meetings of the Inter-Agency and Expert Group on Sustainable Development Goals (IAEG-SDGs).

The <u>aim of the Ramsar list is</u> "to develop and maintain an international network of wetlands which are important for the conservation of global biological diversity and for sustaining human life through the maintenance of their ecosystem components, processes and benefits."

There are currently over <u>2,400 Ramsar Sites around the world</u>. They cover over 2.5 million square kilometres, an area larger than Mexico. The network of Ramsar Sites includes coastal and inland wetlands of all types. The Convention on Wetlands works to reverse wetland loss and degradation worldwide.

Wetlands in India – an introduction

Wetlands have a deep connection with Indian culture and traditions. Loktak Lake in Manipur is revered as "Ima" (Mother) by locals, whereas Sikkim's Khecheopalri Lake is popular as the "wish fulfilling lake". The north Indian festival of Chhath is one of the most unique expressions of the association of people, culture, water and wetlands. The Dal Lake in Kashmir, Khajjiar Lake in Himachal Pradesh, Nainital Lake in Uttarakhand and Kodaikanal in Tamil Nadu are popular tourism destinations. Wetlands find a mention even in Chankaya's Arthashastra, where it is referred to as "anupa," or incomparable lands, and considered sacred.¹

Wetlands receive protection from several central rules and regulations. Provisions of the Indian Forest Act, 1927, the Forest (Conservation) Act, 1980 and the Indian Wildlife (Protection) Act, 1972, define the regulatory framework for wetlands located within forests and designated protected areas. With Prime Minister Narendra Modi making sustainability a key aspect of development, there has been an overall improvement in how India cares for its wetlands. As a result, the country is now a land of 49 Ramsar Sites. This is the largest network of Ramsar Sites for any country in South Asia. A Ramsar Site is a wetland site designated to be ofinternational importance.

India has nearly 4.6 per cent of its land as wetlands, covering an area of 15.26 million hectares and has 49 sites designated as Wetlands of International Importance (Ramsar Sites), with a surface area of

10,93,636 hectares.

Millions of migratory birds flock to India, and wetlands are critical to this annual phenomenon. Ecologically dependent on wetlands, migratory water birds connect continents,

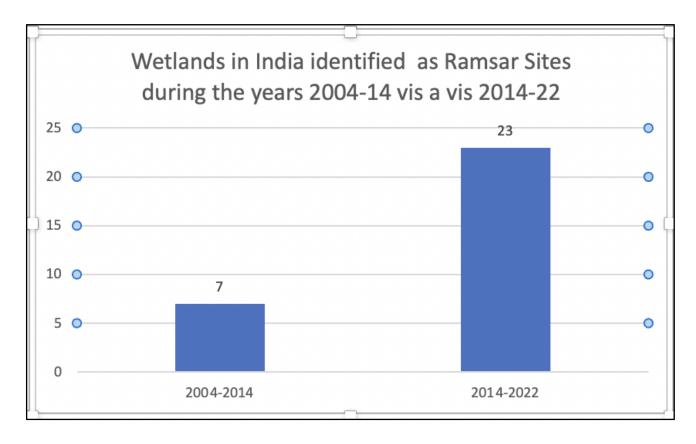

¹ Why India values wetland conservation by Union Minister of MOEFCC, Hindustan Times, dated February 05, 2022

hemispheres, cultures, and societies through their seasonal movements. Migration is a period of great vulnerability, when birds experience the highest mortality rates. The "stopover" sites provide migratory birds rest, protection from predators and inclement weather before moving on to the next leg of their journey. A diversity of wetland communities offers essential stopovers for birds. The Central Asian Flyway (CAF) is one of the nine global water bird flyways; nearly 71 per cent of the migratory water birds of the CAF use India as a stopover site. Sustaining the health of India's wetlands is thus crucial for maintaining the water bird populations within the flyway.

While wetlands are globally under threat for many reasons, including water drainage, pollution, unsustainable use, invasive species, deforestation, and soil erosion, India is proudly reversing the global trend of shrinking wetlands.

The <u>Ramsar convention entered into force in India on 1 February 1982</u>. The number of Ramsar sites (Wetlands of International Importance) in India have <u>increased to 49 covering an area of 10,93,636 hectares</u> which include 21 new sites designated during 2019-2021. **India has the largest number of Ramsar sites in South Asia.**

During 2004-14, **seven wetlands in India were identified as Ramsar Sites -** two in Himachal Pradesh, two in Jammu & Kashmir, one in Tripura, one in Uttar Pradesh and one in Gujarat. During the years **2014-22**, **23 wetlands have been identified as Ramsar Sites in India** - one in West Bengal, two in Maharashtra, nine in UP, three in Punjab, one in Uttarakhand, one in Bihar and one in Ladakh, one in Haryana, one in Gujarat.

Wetlands of India Portal - *knowledge hub for use of wetlands managers and stakeholders*

On October 2, 2021, MoEFCC <u>launched</u> a web portal - <u>'Wetlands of India,'</u> giving details on wetlands of the country, which was launched by the Minister of Environment, Forest and Climate Change, Shri Bhupender Yadav. The portal is a single point access to all information relating to wetlands.

The portal also hosts capacity building material, data repository, videos and information for students. Importantly, a dashboard for each State and UT has been developed to access the portal and populate it with information of wetlands in their administration.

Source

Recent Developments

- 1. <u>As on February 2, 2022, India has 49 Ramsar Wetlands.</u> Khijadia Bird Sanctuary, Gujarat and Bakhira Bird Sanctuary, U.P have been added to the list of Ramsar Sites, making India the country with the highest number of Wetlands in South Asia.
- 2. National Wetland Decadal Change Atlas prepared by the Space Applications Centre (SAC), Ahmedabad released highlights changes which have happened in Wetlands across the country in the past decade.
- 3. On August 14, 2021, <u>four wetlands from India got recognition from the Ramsar Secretariat as Ramsar sites.</u>
 - Haryana got its first Ramsar site, Gujarat got three more after Nalsarovar which was declared in 2012.
 - Thol Lake Wildlife Sanctuary from Gujarat lies on the Central Asian Flyway and more than 320 bird species can be found here. The wetland supports more than 30 threatened waterbird species, such as the critically endangered White-rumped Vulture and Sociable Lapwing, and the vulnerable Sarus Crane, Common Pochard and Lesser White-fronted Goose.
 - Wadhvana Wetland from Gujarat is internationally important for its birdlife as provides wintering ground migratory to waterbirds, including over 80 species that migrate on the Central Asian Flyway. These include some threatened or nearthreatened species such as the endangered Pallas's fish-Eagle, the vulnerable Common Pochard, and the near-threatened Dalmatian Pelican, Grey-headed Fish-eagle and Ferruginous Duck.

4. On World Wetland Day 2021, <u>MoEFCC announced the establishment of a Centre for Wetland Conservation and Management (CWCM)</u>, as a part of the National Centre for Sustainable Coastal Management (NCSCM), Chennai, an institution under the Ministry.

Bhupender Yadav 📀

Speaking at the launch, the Union Minister of State for Environment highlighted the importance of wetlands in providing various ecosystem services. "The dedicated Centre which is launched today would address specific research needs and knowledge gaps and will aid in the application of integrated conservation. approaches for management and wise use of the wetlands."

5. In 2020, MoEFCC took up "<u>wetlands rejuvenation</u>" as a transformative idea. The programme is structured around a four-pronged approach: developing baseline information, rapid assessment of

wetlands' condition using a set of parameters in the form of wetland health cards, enabling stakeholder platforms in the form of wetland Mitra (friend) and management planning. The programme has since been upscaled to cover over 500 wetlands.

6. On World Wetland Day 2021, Ministry

of Jak Shakti highlighted that Namami Gange is the first of its kind program where Wetland Conservation is integrated with Basin Management Plan.

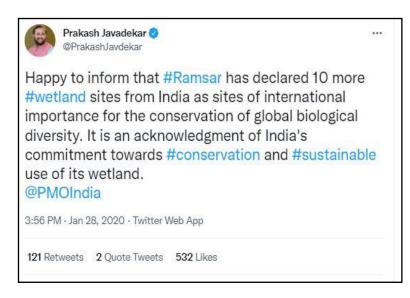

- Innovative work is done by the <u>National Mission for Clean Ganga</u> (NMCG) for wetland conservation linked to River Rejuvenation, which would help the entire country as a model framework.
- A massive scientific and community-based programme to develop Health card and management of 10 wetlands in each of the 50 plus Ganga districts was also launched.

- 7. In December 2020, <u>India added Tso Kar Wetland Complex in Ladakh as its 42nd Ramsar site</u>, which is a second one in the Union Territory (UT) of Ladakh.
 - The Tso Kar Basin is a high-altitude wetland complex, consisting of two principal waterbodies, Startsapuk Tso, a freshwater lake of about 438 hectares to the south, and

Tso Kar itself, a hypersaline lake of 1800 hectares to the north, situated in the Changthang region of Ladakh, India. It is called Tso Kar, meaning white lake, because of the white salt efflorescence found on the margins due to the evaporation of highly saline water.

- The Tso Kar Basin is an A1 Category Important Bird Area (IBA) as per Bird Life International and a key staging site in the Central Asian Flyway. The site is also one of the most important breeding areas of the Black-necked Crane (Grus nigricollis) in India. This IBA is also the major breeding area for Great Crested Grebe (Podicepscristatus), Bar-headed Geese (Anserindicus), Ruddy Shelduck (Tadornaferruginea), Brown-headed Gull (Larusbrunnicephalus), Lesser Sand-Plover (Charadriusmongolus) and many other species.
- 8. As on January 28, 2020, <u>10 more wetlands from India got the Ramsar site tag</u>, Maharashtra got its first, Punjab added 3 and UP 6 to its list².
- In a major recognition towards Government of India's effort towards conservation, restoration and rejuvenation of its wetlands, Ramsar declared 10 more wetland sites from India as sites of international importance.

9. For conservation and management of identified wetlands including Ramsar sites in the country, the Centrally Sponsored Scheme of National Wetlands Conservation Programme (NWCP) was implemented till the year 2012-13. To have better synergy and to avoid overlap, the NWCP has been merged in February, 2013 with another scheme called National Lake Conservation Plan (NLCP) into a new integrated

scheme of 'National Plan for Conservation of Aquatic Eco-systems' (NPCA) for holistic conservation of lakes and wetlands.

- 10. <u>India's National Wildlife Action Plan</u> (2017-2031) identifies conservation of inland aquatic ecosystems as one of the 17 priority areas, and envisages the development of a national wetlands mission and a national wetlands biodiversity register as critical interventions. In addition, integration of wetlands in river basin management has been identified as a strategy for the management of river systems.
- 11. In 2017, the Union Ministry of Environment, Forest and Climate Change (MoEFCC) notified the Wetlands (Conservation and Management) Rules under the Environment (Protection) Act, 1986 (EP Act). As per the provisions of these rules, state wetlands authorities have been constituted as the main policy and regulatory bodies within states.

² https://pib.gov.in/PressReleseDetailm.aspx?PRID=1600857

12. Further, under the EP Act, coastal wetlands are protected under the <u>Coastal Regulation</u> <u>Zone (CRZ) Notification (2018)</u> and its amendments and the Island <u>Protection Zone (IPZ)</u> Notification 2011.

Conclusion

Wetlands are our <u>natural buffers against increasing risk of floods</u>, <u>droughts and tropical cyclones</u>. Wetlands can act as sponges, storing peak rainfall and releasing water gradually during lean season. The floods in Kashmir Valley in September, 2014 and Chennai city in December, 2015 are reminders of the ways wetland destruction can make lives vulnerable. Evidences from Super Cyclone Kalinga of 1999, Indian Ocean Tsunami of 2004 and Phailin of 2013 underline the role coastal wetlands as estuaries and mangroves can play in buffering communities from impacts of these cyclones and wave surges.

Integration of wetlands within disaster risk reduction planning can be achieved by a series of collaborative actions between wetlands managers and those responsible for implementation of disaster risk reduction actions. Assessment of wetland ecosystem health should be made a part of District level disaster planning processes. Wetland management plans should have an in-built component of disaster risk reduction to address the likely impacts of disasters on ecosystem health. Wetlands conservation and restoration should be included within the suite of actions proposed for reducing disaster risk, particularly those related to water, food and climate security. States should constitute Wetland Authorities as nodal agencies for integrated policy, planning and regulation of wetlands. Representation of Disaster Management Authorities should be ensured within the State Wetland Authorities. Mass awareness campaigns should be undertaken to educate stakeholders from all walks of society, particularly local communities on the value of wetland ecosystems.

The Government of India accords high significance to wetlands conservation and seeks to mainstream its full range of values at all levels of developmental planning and decision-making.
